My business idea is Morning Cup, a proposed tea stall serving office workers in Hinjawadi Phase 1, Pune, Maharashtra, India.
I have not started regular operations.
Workers have short morning breaks and sometimes wait in queues for tea.
I would offer tea with pre-order pickup and reusable-cup discounts.
I spoke to 30 workers: 18 would consider buying, 8 preferred existing stalls and 4 were unsure.
There are no confirmed orders or advance payments.
Three existing tea stalls serve the area at similar prices.
My proposed difference is scheduled pickup, but customers have not yet tested it or confirmed that they value it.
I can prepare tea and handle payments, and plan to hire one helper.
I need tea leaves, milk, sugar, drinking water and paper cups.
A local dairy and wholesale grocery shop are potential suppliers, but prices and supply agreements are not confirmed.
Startup investment is INR 60000 for equipment, a deposit and opening stock.
Own funds are INR 20000 and requested loan is INR 25000.
The loan is not approved and I have no other funding committed.
The selling price is INR 20 per cup.
I estimate selling 60 cups per day for 25 operating days per month.
Estimated revenue is INR 30000 per month.
Variable cost is INR 8 per cup, or INR 12000 per month at these sales.
Monthly fixed costs are rent INR 10000, helper wages INR 7000, transport INR 3000 and utilities INR 2000.
Total expenses are INR 34000 per month, giving an estimated operating loss of INR 4000 per month before tax and borrowing costs.
I have not confirmed site permission, loan terms or food-business registration.
I want mentoring to test customer demand, secure permission and funding, and revise the cost and sales plan before opening.
