SYNTHETIC REHEARSAL INPUT

Conflicting costs and prices

I want to sell tea to office workers in Bengaluru. I wrote INR 10 per cup in my first answer and INR 15 per cup in my second answer. I cannot confirm which selling price is correct. My total initial investment is INR 20000, but my own funds are INR 12000 and my requested loan is INR 18000. I plan to sell 120 cups per day for 25 days per month. I called INR 90000 my monthly profit, but I have not supplied ingredient costs, rent, other expenses or verified sales. I have not researched customers or nearby competitors.

Fictional business. Applicant statements are self-reported. Created for an openly labelled hackathon demonstration.
