SYNTHETIC REHEARSAL INPUT

A specific tea-stall proposal

I plan to open a tea stall in Jayanagar, Bengaluru, Karnataka. My customers are office workers who need quick morning tea. I spoke to 30 office workers; 18 said they would consider buying tea, but these are not confirmed orders. I plan to sell 120 cups per day at INR 10 per cup and operate 25 days per month. My total initial investment is INR 20000, consisting of INR 12000 own funds and an INR 8000 requested loan. Planned monthly expenses are INR 22000, including ingredients, rent and transport. I will buy tea leaves and milk from a local wholesale supplier. I need a stove, kettle and reusable cups. Two nearby stalls are alternatives, according to my own observation. My difference is pre-order pickup and reusable cups. The business has not started. All figures and market observations are my estimates.

Fictional business. Applicant statements are self-reported. Created for an openly labelled hackathon demonstration.
